Spain a Land of Wealth.

The natural wealth of Spain is enormous. It has been neglected for lack of enterprise. Its mineral deposts are the richest in the world. They will afford a stimulus to industry and will contribute a vast revenue to the people. By concentrating within its own realm the effort and aspiration which Spain has heretofore dissipated on its colonies it may in time regain much of the glory and importance which it once en-

CAN'T CROWD US OUT

Trade of United States with Canada Shows Big Increase.

This Despite the Fact of the Preferential Tariff Rates Established Between Canada and Great Britnin-A Year's Record.

The Canadian preferential tariff in favor of the United Kingdom has not had the expected effect of reducing the proportion which the United States supplies of manufactures imported into Canadian territory. A copy of the Canadian Manufacturer, just received by the treasury department bureau of statistics, sharply calls attention to the fact that imports of dutiable articles into Canada from the United States in the fiscal year 1899 aggre gated over \$44,000,000 and from Great Britain less than \$28,000,000, and that the United States is furnishing a much larger amount of manufactures of iron and steel than the United Kingdom,

"The preponderance of trade is overwhelmingly in favor of American manufactures, and tariff preference in favor of British goods to the contrary notwithstanding, American manufactures are taking the cream of the business. Is it possible that British manufacturers are entirely unable to compete in the Canadian market?"

The Canadian tariff, it will be remembered, was in 1897 so adjusted that the duty on articles entering Canada from the United Kingdom was made, beginning with April, 1897, 121/2 per cent, less than the rate from other parts of the world, and on July 1, 1898, another reduction in favor of the United Kingdom was made, bringing the total reduction to 25 per cent. as against goods coming from other parts of the world. A recent announcement indicates that, beginning with July 1, 1900, a still further reduction would be made, so that the rates of duty on articles from the United Kingdom would be 33 1-3 per cent, less than those from other parts of the world While the effect of the third reduction of 121/2 per cent., which went into operation July 1, 1900, cannot yet be determined, it is practicable to compare the imports of manufactures into Canada from the United Kingdom and the United States respectively during the years ending June 30, 1898, 1899 and 1900, and thus determine whether the advantages which the manufacturers of the United Kingdom during that time have a perceptible effect upon the relative growth of the imports of Canada from the two countries, the United Kingdom and the United States.

SAVED FROM RATTLESNAKE. OPPONITE THE MCNARCE LAG Good Shot by Hunter Prevents Rep-

on a Boy.

Otto Doetcher, a 14-year-old boy employed in the office of H. J. Young, manager of the National Mercantile company, of Toledo, O., had a terrible experience with a rattlesnake while visiting at the home of a relative near

White House. He desired to go out and get some frogs in the ponds which are located on the farm where he was visiting. While walking along the bank he stumbled and fell, and as he was falling he saw a huge snake under him It was lying in the sun and was

stretched out its full length. His body had hardly struck the ground and he had just discovered the rentile when he heard the snake rattle, and a second later the reptile coiled itself and raised its head slight- to ly into the air, showing its poisoning fangs. A man who had been out huntrepublican politics in Apache ing happened along and saw the boy and his predicament. He decided upon his action at once, and raising the gun to his shoulder fired at the TEA GARDEN DRIPS is a reptile's head. His aim was good and the snake's head fell to the ground. The boy was badly frightened, and could barely reach the home of his

The hunter secured the rattles on the snake's tail and now has them in his possession. There were 27 of them, and this would indicate that the snake was 30 years of age, as they are supposed to accumulate rattles at the rate of one each year after they have reached the age of three years.
